

two weeks she was regularly drinking kefir. A day after abandoning kefir she had no more complaints.

We could cite many more dozens of examples of using computer diagnosis based on the Voll method.

The principle possibilities of this method are:

- determining the functional condition of the various human organs and systems;
- revealing the early signs of illness;
- individual prescription of natural preparations to restore the damaged functions of the body organs and systems;
- determining the deficits of vitamins, minerals and amino-acids;
- revealing allergic reactions to various foods, air pollutants, and contact allergens.
